

LIGHTNING **LED Message Sign™**

AEL/SEL 03OE-03-SIGN

The Ultra-Portable, Instant Signage Solution

The *LIGHTNING* LED Message Sign has no equal in flexibility, size and setup speed. Capable of going places where conventional trailer-mounted changeable message signs never could, a *LIGHTNING* Sign can function indoors, outdoors, off-road and in the tightest of spaces. And on the tightest of budgets. Weighing only 32 pounds, it can be transported in the back of a car or SUV and set up by one person in minutes.

The *LIGHTNING* LED Message Sign's LEDs are intense, so it grabs attention on the sunniest day. The sign is capable of displaying a new message instantly and can retain hundreds of messages for future display, stored in memory and retained indefinitely. Contingency messages can be called up instantly in an emergency. Programming is accomplished by local wireless remote or software or via laptop or network.

It stows in a padded, water-resistant carrying bag and can be erected on its own stand or attached to a pole, wall or vehicle hitch. The sign display is lockable for theft deterrence.

LIGHTNING LED Message Signs come ready to plug into any AC outlet; add the internal battery pack and the sign will operate independently for more than 2 days on a single battery charge. The internal battery pack utilizes the latest lithium-iron-phosphate battery technology for light-weight reliability. DC-only is an option when a vehicle is providing the power for on-the-go applications.

Applications

- **Public Safety/First Responders** – at incident perimeters for motorists and pedestrians.
- **Public Health Departments** – in vehicle lines approaching Points of Dispensing (PODs).
- **Airports** – at entrances and/or security points, parking lots.
- **Street/Highway Departments** – where drivers encounter detours due to construction or infrastructure failures.
- **Hospitals, Public Venues, Events** – parking lot entrances; lobby areas.
- **Commercial/Industrial** – loading docks, parking lots and surface streets to direct motorists and truckers.
