

EventCAST

Radio Stations, Ready to Roll

Enhance event visibility, sponsorships, public information and safety. EventCAST portable radio stations are available nationwide for rental.

EventCAST Portable Radio Stations can broadcast a variety of content to motorists who are on roadways and in parking lots in proximity to the transmitting location. Common applications include public safety information; event information (live or prerecorded); signal quality / range evaluation and temporary / emergency signals for commercial broadcasters. The self-contained package is complete with all the electronics in a case, cables and a quick-setup antenna.

Broadcast Live

The EventCAST System can be connected to the output of your mixer board to extend audio programming to automobile radio receivers and/or to serve as the nexus of a remote speaker system. Connect microphones or other sources to the board to broadcast a live event.

Recorded Programming

Included is an onboard audio system to repeat audio files before, during or after an event. You can also mix live and recorded sources as desired.

Authorization

Government agencies, school districts and parks can license EventCAST systems for noncommercial information broadcasting over a 3-5-mile coverage radius. Educational Institutions (schools, churches and nonprofit groups with an educational charter) can broadcast on their property without a license under FCC Rules Part 15.221.
